

## Transport-Swab | Sample Collection

Transport Swab is the ideal sampling device for customers looking for an environmental sample collection device containing more than 1mL of pre-filled diluent. The device is available in 4mL & 10mL volumes. The pre-filled bottles come sterilized and with ample headspace for additional sample to be added. The Rayon swab tip sits in the broth, allowing organisms to release from the swab bud. Transport Swab makes sample collection efficient and easy. Collect your samples by swabbing the surface, recapping, and the liquid is ready to be transferred to the media of our choice.
